

# SNOW REMOVAL

## DE-ICER STORAGE AND HANDLING

- Store road salt and sand indoors (salt domes).
- Keep salt dome doors closed until loading.
- Clean up major salt spills immediately.
- Do not overfill trucks.

## SNOW REMOVAL AND SALT APPLICATION

- Shovel walkways and only use de-icers when necessary for safety.
- Use the most cost-effective de-icer with least environmental impacts.
- Weigh salt trucks before and after use to minimize product losses.
- Avoid using salt/sand in favor of alternatives around ecologically sensitive areas.
- Do not dump snow piles in or within 100 feet of streams and drinking water sources.
- Consider road width, traffic concentration, surface water proximity, and road temperature when applying de-icers.
- Post “no parking” signs during heavy snows to allow sufficient room for plowing.
