The Chessie Circle Trail is a future pedestrian and bicycle path to be built within the existing rail corridor, a remnant of the Toledo Terminal terminal that in the past crisscrossed the city of Toledo. The corridor right-of-way was purchased in 2011 from CSX railroad (a descendant of the former Chesapeake System) by a group of regional partners: the City of Toledo, the University of Toledo, Metroparks of the Toledo Area, the Wood County Port Authority, and the Wood County Park District. Although trains still operate in some parts of the corridor, much of the right-of-way is vacant and the tracks have been removed. Construction of the multi-use path is part of TMACOG’s long range transportation plan for the region.
